BLOC-CUT SEGMENTS

Bloc-Stone Saw Pvt. Ltd., is a company spearheaded by Diacore and expert Italian Technicians who possess a rich experience in the cutting industry. These experts have gained a vast experience in the last 3 decades in the production of diamond tools for marble, granite, cement and asphalt.

By its close association with Diacore, the company is in a unique position to offer not just products related to cutting stones but overall solutions to customers in effectively using tools and blades. This uniqueness also comes from the very vast experience and understanding, the technicians possess. They offer a "doctoring" service to customers assessing their machines and blades before they even sell or install the Bloc-Cut segments. With Diacore and its group Companies, understanding customer needs is a primary goal and such a goal is pursued through a constant activity of 'interaction before a sale'.

Manufacturing

Apart from effective cutting, Tiles' and slabs' processing tools require Consistency, Reliability, Care and Service. Therefore, Bloc-Cut Segments are manufactured using high quality raw materials to achieve higher cutting parameters in terms of speed and depth of cut thereby increasing productivity.

The segments are manufactured using advanced machinery and technologies. These segments also ensure minimal thickness variation in the tiles while cutting. Bloc-Cut segments are manufactured in the state-of-the-art factory in Jigani, a suburb of Bangalore.

Equipment that is used in the manufacture is from world-leaders like Dr. Fritsch of Germany.

Total Solution at lowest total cost

Products

Single discs and traditional diamond segments from Ø 300 to Ø 3500 mm saws.

Segments for Granite, Lime stone, Sand Stone & Concrete

Wall Saw

Horizontal Segments and discs.

Segments for Multi Block Cutter
– Same Diameter

Core drills for stones and concrete for different diameters

Segments for Multi Block Cutter
– Scallatta Combinations
